Mobile digital technology is the high-quality way to acquire knowledge and education of the youth

Vinnitsa College National University of Food Technologies

E-mail: politex2004@rambler.ru

The aim of this research is to engage the students to discuss the most important social, environmental and economic challenges in Vinnitsa with using the power of the modern mobile digital devices. We achieve it by choosing the project by student groups; their further research in the selected topics and the creating of e-portfolio. The main idea of the project can be applied in any city of Ukraine.

The project is carried out in four phases, each of which ends with results for student groups. At the final stage the general conference is held, which provides the discussion the portfolio of the participating teams.

Expected results of the project:

1. Increasing the students' motivation in learning.
2. Systematization of information about the cultural, artistic and sport places, the environmental situation, the financial and economic activities, the religious life of the city by the students.
3. Development of the ethical and aesthetic qualities of the youth.
4. Study of Ukrainian traditions, the development of national identity of the participants.
5. Acquaintance with modern innovative approaches in education.
6. Development of information competence, social activity of the future specialists.
