## **Communication assistance by the learning management system in educational team**

*National Technical University of Ukraine "Kyiv Polytechnic Institute", Kyiv,  
Ukraine*

*E-mail: VolodP@ukr.net*

The basis of the modern understanding of the information society is related to the new consideration of information. It is necessary to distinguish between the message (or messages), interpretation (or perception) and communication (transmission, delivery). For example, Internet development shows us: now the most important in information is communication, which leads to action.

Teachers mostly look on the academic process as "feeding" of passive students by knowledge. Therefore, it is necessary to modify the learning process towards strengthening the communication component. In this effort the world leader in support of educational process - the system MOODLE can help us. We can look at MOODLE as a way to attract learning group to communicate, especially since that is the basis of its architecture. Please note the following features of the system:

- Forum where the teacher explains common errors and difficult moments.
- Annotate by teacher saved in the system practical assignments.
- Possibility for students to estimate discipline content.
